

AMENDMENTS

Amendments to the Specification:

Please amend the paragraph at page 12, lines 8-18 of the specification, as indicated below:

Those skilled in the art are familiar with computer software or the like which is capable of performing such conversion of voice signals into text signals. This computer software is often referred to as "speech recognition" or "~~voice recognition~~" technology and is available from a number of software publishers. For example, for personal computer applications, the program "Dragon Naturally Speaking" is available from Lernot & Hauspie (Belgium). One of many descriptions of such speech recognition technology can be found in U.S. Patent 4,783,803 to Baker et al., which is incorporated herein by reference. An example of an apparatus which is configured to receive a stream of voice signals and convert them to text signals for uses by a personal computer is the "Text Grabber" manufactured by Sunbelt Industries Technologies Group of Ponte Vedra Beach, Florida.
